Wildan Kurnia Candra

Back End Web Developer

+6287889641509 Purbalingga,Indonesia wildan.desperado@gmail.com wildan-candra wildan.page

SUMMARY

Backend Engineer with 4+ years of experience building and maintaining scalable backend systems, APIs, business logic, and third-party integrations. Experienced in applying Clean Architecture and maintainable software design principles. Comfortable leveraging AI-assisted development tools and modern engineering workflows, including MCP-based integrations, to improve productivity while maintaining strong code ownership, critical thinking, and engineering fundamentals.

EXPERIENCE

Komerce ↗

- Back End Developer — Purbalingga, Central Java, Indonesia — 08/2022 - PRESENT
  - Built and maintained scalable back-end systems supporting multiple core products, including the main logistics platform.
  - Developed key algorithms for shipment cost calculation, balance management, and transaction processing.
  - Integrated services with major shipping providers (JNE, SICEPAT, Ninja, SAP, SPX, LION), enhancing logistics automation and delivery coordination.
  - Collaborated with front-end teams and other departments to ensure seamless mobile and web compatibility.
  - Investigated and resolved production-level issues, maintaining system reliability and minimizing downtime.

Kedata Indonesia Digital ↗

- Back End Developer — Yogyakarta, Central Java, Indonesia (Remote) — 02/2026 - 09/2026
  - Contributed to the development and maintenance of the “Digdaya NU Persuratan” backend system.
  - Resolving reported bugs, ensuring system stability and reliability.
  - Developed internal automation tools (e.g., letterhead generator, stamp generator, peruri export files) to replace manual processes and improve operational efficiency.

PT Mardizu Sejahtera ↗

- Full-Stack Web Developer — Bekasi, West Java, Indonesia — 08/2020 - 07/2022
  - Led end-to-end development of internal tools to support daily business operations.
  - Managed hosting environments, domain configurations, and web performance optimization.
  - Streamlined documentation and workflow processes through digital transformation.
  - Created internal dashboards and marketing pages to support team collaboration and partner onboarding.

SKILLS

- Go — Gin, Echo, Fiber
- PHP — Laravel, CI
- JS — Vue, Express
- UI Framework — TailwindCSS, Bootstrap
- Web Server — Nginx
- Real-Time — WebSocket, SSE
- Database — MySQL, PostgreSQL, MongoDB
- Caching — Redis
- Indexing — ElasticSearch
- Message Broker — RabbitMQ, Asynq
- Container — Docker
- Version Control — Git

EDUCATION

National Vocational High School 2 Purbalingga (Software Engineering) 04/2016 - 04/2019

- 2nd Place LKS SMK 2018 Purbalingga Championship - Software Engineering - Java Netbeans.
- Finalist LKS SMK 2019 Purbalingga Championship - 2D Animator - Adobe Flash.

PROJECTS

KKP (National Ministry of Marine Affairs and Fisheries) ↗

- **Pilar Kapi Landing Page (Full-Stack)** 12/2024

  Fully customizable landing page and CMS.

  - Slicing design into code using Vue Typescript.
  - Designed database structure and developed APIs with Golang.
  - Improving UI make it fully customizable from admin.
  - Scrapping data from internal KKP API for statistics.

- **Harbour Ship Parking Management (Backend)** 10/2023

  Known as SIMPLE, Ship Parking Management (Sistem Informasi Pelabuhan) was a an app for tracking ship locations and parking fees at the port.

  - Handle the key logic API of the app workflow for detecting ship position and status.
  - Automated CHECK-IN / CHECK-OUT detection for ships based on real-time GPS within harbor geofences.
  - Created dynamic geofencing logic for harbor boundaries using coordinate mapping.
  - Built real-time WebSocket-based dashboard for live ship tracking and status updates.
  - Integrated spatial surface analysis to identify whether ships are located in water or land zones using tile-based color mapping (Node.js).
  - Conducted load testing and performance optimization to ensure stability with thousands of concurrent ship connections.

- **Meeting Room Schedule & Booking (Frontend)** 08/2023

  Called Sirupat (Sistem Ruang Rapat) are an application for recording and scheduling rooms and meetings.

  - Analyze app structure including backend data flow and the database.
  - Layouting app pages (Vue Laravel).
  - Create Event Calendar Management like Google Calendar to manage the event.
  - Add digital signature presence for guest to make sure the guest are attending the event.

- **E-Arsip Digital (Full-Stack)** 03/2023 - 06/2023

  Digital archive app that aims to provide a centralized system for the ministry to store, track, and access budget-related information and data.

  - Designing encrypted database structure (MySQL) for securing the application data.
  - Securing login with CAPTHA and Email OTP.
  - Layouting pages to fulfilled with modules.
  - Developed API with Laravel.

An Indonesian Political Parties (Bogor & Cianjur) ↗

- **Kaznet (Frontend)** 01/2024

  Analytical dashboard volunteers data for the Indonesian Election in Cianjur and Bogor 2024.

  - Analyze app structure including backend data flow and the database.
  - Developing an app to meet metrics requirements and track every voter considering of the Bogor & Cianjur 2024 election using VueJS.
